The summer has flown by here and school has already started in my neighborhood grade schools. We know you are busy or are about to get very busy so we will try to keep this short.

PapooTouch and **Papoo**Touch+

There is a new member of the **Papoo**Touch family, where switch access and handheld AAC come together. The new **Papoo**Touch**+** includes scanning capabilities within Grid Player with one or two switches. Use any of the scanning selection methods – auto-scan, step scan, inverse scan (hold to advance), linear scan, row-column, and column-row.

Try the **Papoo**Switch with the **Papoo**Touch**+** if you need a very sensitive motion or proximity switch for your clients. There is also a new carry case to protect the **Papoo**Touch or **Papoo**Touch+.

We have packages available with either device plus **The Grid 2** for editing **Papoo**Touch **Grid Player** pages on your Windows PC.

Optimist MMX-3

In case you did not yet know this, the **Optimist MMX-3** is shipping and selling well. Most of the units sold so far have been the **Optimist MMX-3C** with **The Grid 2** installed. The form factor is identical to the Optimist MMX-2, but carries many internal improvements you will notice as soon as you turn it on.

The prices for **Optimist MMX-3** based devices went up slightly. We tried to keep that increase to a minimum, and hope our customers still see it as a great price for a full Windows 7 power PC with loud volume and switch access for AAC/SGD products. This is the perfect communication system for students and adults alike.

Available with or without AAC software.

The Grid 2 — U.S. release

After many years, **The Grid 2** now supports American English as a separate language to British English! Installing the new version of the program will add the English (United States) language files and new versions of the U.S. grid sets that use this language.

Selecting English (United States) as the language for a grid set will give you predictions, spell checking, verb morphology, symbol searches, and other language tools with American English spelling.

If you would like to upgrade to the American English version of the program, please contact us to request a new installation CD. Installing the new **The Grid 2** when it is already installed will add new features such as new languages and grid sets. It will not delete or overwrite any of your existing languages or grid sets.

Other Sensory Software program titles

The time has come to say goodbye to many of the Sensory Software program titles. AllWrite, ProtoType, Reader, Switch Friendly Games, and Windbag 3 have been discontinued and will no longer be supported. We will do our best to help you for as long as we can as we know these have been valuable to you.

The *new* ZYGO Voice Amplifier (O85)

We have switched to the new ZYGO Voice Amplifier with great results. We have had no problems with this newer version and hope you find it works well for you and your clients. The part numbers have changed slightly from the previous model to 039-0597-xx, the unit comes standard with a Headset mic, and the price remains the same as it has been.

Bear Tracker GPS phone

See what's coming next. The Bear Tracker GPS phone for children and their parents. Information can be found on our web site.

All of our products are available to SLP's and AT Centers for evaluation demonstrations. We gladly provide products to dealers for any local AT events, so let us know ahead of time at which ones you plan to exhibit and what products you would like to have on hand.

Thank you for spending the time with our newsletter. We hope you found it useful and worth the time. If you have any questions or need any support for our products, please contact me at Adam@zygo-usa.com, or by phone at (888) 321-6006, or any of our Customer Support representatives at zygo@zygo-usa.com, support@zygo-usa.com, or (800) 234-6006.
