ZyBox for iOS Switch Input Adapter

The **ZyBox for iOS** is the simplest way to use control switches to operate your iPad or other iOS device. Connect the **ZyBox for iOS** to your iPad using the 30-pin or Lightning connector, snap in one, two, or up to five control switches with 3.5mm plugs, and you have access to the entire iPad and any or all apps that are compatible with the iOS Voice Over (VO) commands.

When the **ZyBox** is plugged into your iOS device, it will automatically turn on VoiceOver, and will automatically detect the number of switches connected. A list of commands is printed on the back of the **ZyBox for iOS** for easy reference. With one-switch the iOS device will speak an auditory prompt of the VoiceOver commands while you hold down the switch.

Since you use the 30-pin and Lightning connectors to plug the **ZyBox for iOS** directly to the docking connector of the iOS device, the Bluetooth connection is still available to do other things, like connect to a Bluetooth speaker, a keyboard, or to a mobile phone. It also means that the **ZyBox for iOS** pulls very little power, unlike Bluetooth connected devices, so you will continue to enjoy long battery life.

Features of the **ZyBox for iOS**:

- 30-pin dock or Lightning-pin connector to iOS
- Six 3.5mm mono jacks for external control switch inputs
- Automatic detection of switch connections
- Automatically turns VoiceOver on and off
- Powered from the iOS device; no internal power required
