pererro   Switch | Access | Control

pererro is an advanced interface which brings the iPad, iPod touch, and iPhone to a much wider audience.

By using a single switch, users are able to navigate the iOS and use the majority of the device such as Phone, Messages, E-mail, Web Browser, FaceTime, Social Media and a whole host of Apps that are available from the App Store, all without touching the screen.

Apple devices are the market leaders in mobile communication – we believe this technology should be available to everyone: Message, Call, or FaceTime your friends; share a web page across your social media apps; use environmental control apps such as **evoassist**, or simply relax and read an e-book

Using a single switch, and the embedded Voice Over capabilities in iOS, you are able to scan through items on the screen and make selections, including entering text. It really is that easy.

Key Features of the **pererro**:

- ❑   Works with almost any VoiceOver enabled app
- ❑   Plug & Play
- ❑   Two scan modes; Auto Forward and Manual Step, enabling you
  to continue using your preferred scanning method
- ❑   Direct input so no Bluetooth battery drain
- ❑   Powers directly from your device
- ❑   3.5mm mono jack socket for universal switch input
- ❑   'Charge through' ability to charge your device without disconnecting
- ❑   Just 36 × 29 × 9 mm

JoyBox and JoyCable
Switch adapters for Windows PC

For any resource center, the **JoyBox** is the ultimate switch connection device. It allows 8 switches to be connected for any use, and 4 more switches can be connected for directional control. The **JoyBox** can be used with almost all switch software, including switch games and communication programs.

The **JoyBox** can be used as a mouse mover. Four switches (not included) control the movement of the pointer, with additional switches for click, double click, or other functions. You can change what happens when each switch is pressed, so switches can provide special functions. For example, you could have a switch controlling a music player's play/pause button, perhaps with another switch to change track.

The **Joycable 2** was one of our first products and continues to be one of our most popular. It is a simple, reliable switch interface for 1 or 2 switches to connect to Windows computers.

There is no driver software needed when using these two adapters for The Grid 2. Grid Driver 6 (software) is included for all other Windows applications.

SKU	Product	Price (USD)
015-1000-00	pererro iOS switch adapter with 30-pin dock connector	$275.00
015-0021-00	JoyBox USB switch adapter for Windows PC	$295.00
