# Communication and Computer Access for Windows PC

A combination of **Communication Aid** using symbols or text, an **On-Screen Keyboard** for controlling other Windows software, and a **Teaching Aid** to provide point and click access to literacy learning grids.

Symbol Communication   Text Communication   Computer Control

The Grid 2 software combines symbol communication, text communication, and on-screen keyboards in a single program. Highly configurable access options for switch users and a range of communication vocabularies completes the package. The Grid 2 builds on those features, seamlessly integrating new activities (such as playing music and sending e-mails) and you can get started straight away with the new, user-friendly interface.

In addition to communication, **The Grid 2** also has built-in computing functionality accessible without leaving the confines of The Grid 2 program. The Grid 2 uses a Workspace to display a sentence bar for speaking, or the Workspace can display any of these computing functions. Grid 2 users now have the option of using the 'computer' functions of their communication aid without the complexity of Windows applications.

Computer Functions

Web Browser

E-mail

SMS Messaging

Word Processor

Media Player

Calculator

Clock

What's New

Extra functions
As well as symbol and text communication and a powerful on-screen keyboard for computer control, The Grid 2 adds some exciting new functionality.

More resources
Acapela speech synthesis voices come standard and additional quality Acapela languages are optional (available in many languages), so speech output has never sounded better. Also included is the Widget Literacy Symbols library.
Sensory Software's new interactive web site allows you to download grids created by other Grid 2 users: grids.sensorysoftware.com

Remote Communication
These days, communication means more than speaking directly to people face to face. The Grid 2 allows you to send email and SMS text messages, Skype, or browse the web right from your AAC program.

User Management with Grid Explorer
The Grid 2 includes Grid Explorer, which enables you to view and manage each user's grids:
- Copy grids just by dragging with the mouse.
- View the hierarchy of a user's grids as a chart.
- Backup users to a CD for safe keeping.

Easy Editing
The way you create, edit and adapt grids is easy in The Grid 2:
- Grids can be created rapidly using an intuitive editor screen.
- Each grid may contain between 1 and 2500 cells.
- Stretch and move cells to make interesting grid layouts.
- New cell shapes and grid backgrounds make grids look fun!

Symbol Communication

The Grid 2 is a powerful symbol communicator, used by people of all ages and abilities who are unable to speak, or whose speech is unclear.

At a basic level, users can select a message to be spoken instantly. You can also select a sequence of symbols to create a sentence. More advanced users can combine symbols with alphabet grids, and use tools such as prediction with symbols. Symbol sentences can be saved, printed, sent as email or sms messages, or simply spoken aloud.

You can quickly and simply add new vocabulary and new pages.

Use the SymbolStix symbols from News-2-You or Widget Literacy Symbols (both are included), or use digital pictures that can be easily captured without worrying about an elaborate storage scheme.

Text Communication

The Grid 2 provides many ways to speed up text input for people unable to use a physical keyboard. Prediction and other tools are available for users who need support with language or spelling:

• Intelligent prediction learns as you write.

• You can use "sounds like" or "spelled like" word matching.

• Create abbreviations for typing useful phrases in just a few selections.

Text communication grids are included with **The Grid 2**, and can be adapted to suit individual needs.

Text Chat + Messages gives users the option to save sentences. Quick searching allows you to find and edit saved messages. Power users can maintain multiple message lists for different topics. Verb Morphology allows you to change a verb to a different tense just by selecting a cell.
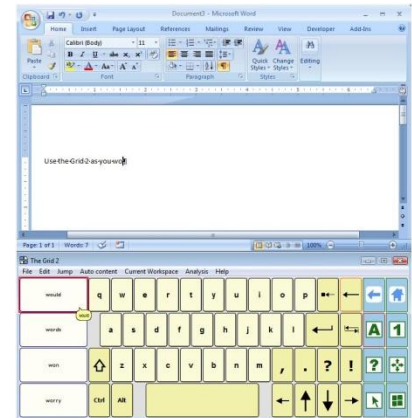

Computer Control

Our computer control grids are designed to make all the features of Windows immediately accessible to people who do not use a standard keyboard and mouse - even to people using a single switch.

In addition to replacing the keyboard and mouse with an on-screen display, The **Grid 2** allows you to open and manage programs, move and resize windows, browse web sites and much more.

The Grid 2's computer control grids are set up for common applications like Word, Internet Explorer, and Outlook Express. Grids for controlling other software can be created in **The Grid 2** and shared online. Accessing other programs is very fast with The Grid 2. This high speed is due to the efficient way you control your computer. Each cell on the screen can be programmed to perform any number of functions, allowing users to perform complex tasks by simply selecting one cell.

Demo CDs

Demonstration CDs for **The Grid 2** and Acapela speech synthesis are available on request. This demo is fully functioning for a period of 30 days, after which it must be licensed to continue.

Beeline

A grid set for *The Grid 2* by Sensory Software International Ltd

Beeline is a symbol-based, single word vocabulary designed for users with relatively good language skills.

Beeline offers a large, single word or short common phrase vocabulary with a view to generating novel sentences. The majority of the high frequency core vocabulary is accessed by one or two selections with a maximum of three selections for the majority of words. **Beeline** follows a rigid structure that makes it relatively easy to locate and add new words.

The consistent layout is designed to help the user generate sentences through motor planning. Theories of motor planning and automaticity have been applied to the creation of **Beeline.**

Key Features

- Designed for symbol users ready to make their own sentences word by word
- Core words on top page with access to topic pages
- Majority of the large vocabulary accessed from just 1 to 3 selections
- Special features such as e-mail, internet and media player
- Easy for parents, teachers and SLP's to add content within existing structure
- Lesson plans that fit within the curriculum
- Includes verb morphology, word completion and next word prediction

You must have **The Grid 2** installed to use this grid set. Download from Sensory Software Online Grids. Contact ZYGO-USA for a demonstration copy of **The Grid 2**.

**Beeline** was created by Gillian Rumble of VOCAtion, and Sensory Software International Ltd.

CALLtalk

A grid set for *The Grid 2* by Sensory Software International Ltd

CALLtalk was designed primarily for school children, but can also be used by adults when adapted and personalized.

CALLtalk is more complex than a 'beginner' vocabulary and goes beyond basic functional communication. Users need to understand topic categorization and should be starting to put two or more words together. It is for direct touch screen users as well as switch scanners.

CALLtalk users

- Primary school students with reasonably good educational potential (mainstream and/or special settings) following 5-14 or National Curriculum or IEPs.
- Relatively cognitively and language able children aspiring to acquire at least some degree of literacy – i.e. for whom 'talking' and writing in sentences could be a realistic goal.
- Users frustrated by limited vocabularies.

Key Features

- Huge vocabulary (~ 3,000 words & phrases) but only 30-35 symbols per page
- Very consistent layout
- Sentence starters
- Grammatical elements available from every page
- Word prediction built in
- Self-closing popups for speed
- "All on one page" worksheet type pages for use in classroom activities

Education Use

In addition to the comprehensive communication grids, there is a "School Stuff" section organized into curriculum areas, with worksheets for classroom activities.

Download demo

Download a free demo version of CALLtalk from Sensory Software Online Grids and install the Grid bundle. You must have **The Grid 2** installed to use this grid set. Contact ZYGO-USA for a free demonstration copy of **The Grid 2**.

**CALLtalk** was developed by Janet Larcher and Sally Millar.

Chatterbox

A grid set for *The Grid 2* by Sensory Software International Ltd

Chatterbox is a great grid set for eye gaze users, or those with small handheld devices like PapooTouch. With many communication grid sets, as the number of cells per grid is reduced, the amount you can say is also reduced. However, there are a large number of people who require fewer cells due to access issues, but who still have a lot to say. Chatterbox breaks the mold, with over 3,000 unique words but just 24 cells per grid.

Chatterbox has many innovative features, including the use of The Grid 2's next-word prediction on the front page, which makes it very fast to generate sentences. The front page has links to core vocabulary, for immediate access, such as small words, pronouns and common verbs.
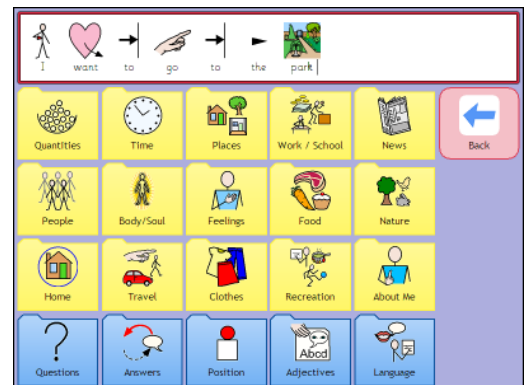

Additional Vocabulary

Additional vocabulary is available on the Vocab page. The word categories are very intuitive, and are based on topics rather than alphabetical indexing, which reduces the literacy requirement.
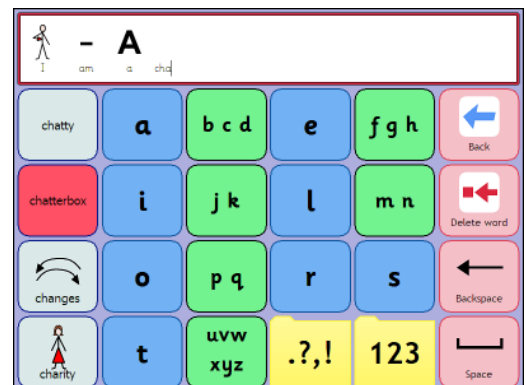

Keyboard with Prediction

Chatterbox uses an innovative keyboard with prediction, which allows common letters to be accessed in one hit, and less common letters in two hits. Using this layout, it is possible to fit a full keyboard on the screen without losing typing speed.

Download demo

Chatterbox is free for use with **The Grid 2**, and is available with or without adult words. Download **Chatterbox** from Sensory Software Online Grids and install the Grid bundle. You must have **The Grid 2** installed to use this grid set. Contact ZYGO-USA for a free demonstration copy of **The Grid 2**.

Fast Talker

A grid set for *The Grid 2* by Sensory Software International Ltd

Fast Talker 2 is the most complete text-based grid set for use with **The Grid 2**. It combines powerful communication grids with some of the most popular modern computer applications such as Facebook, YouTube and Skype.

The communication grids are **simple** to use, **fast** to access, and packed with **powerful** features to make talking as efficient as possible.
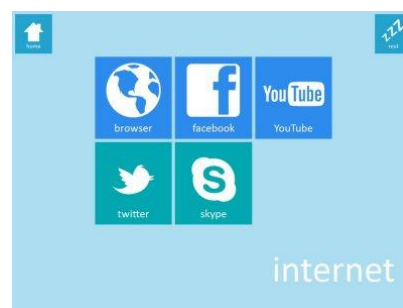

Key Features

- Categorized message storage with quick retrieval
- Word completion
- Next word and 2x word prediction
- Abbreviation expansion
- Use eye gaze, head pointers, joysticks, and switches

Fast Talker includes a wide range of other features:

- **Facebook** – new and improved grids
- **Twitter** – complete control of Twitter - totally accessible
- **YouTube** – the easiest way to search for videos!
- **Video player** – play video files directly from your grids
- **Music playe**r – access your whole music library
- **Settings** – user controlled settings panel
- **Internet browser** – with alternative access features
- **E-mail** – sync your existing email address with The Grid 2
- **Text messaging** – use a Bluetooth cell phone or GSM module
- **Skype** – chat and instant message with simple communication grids
- **Computer control** – switch access with a built in dwell timer (great for eye gaze)
- **Environment control** – ready-made pages for TV, cable, hi-fi, telephone and home automation. The Grid 2 works with all the major environment control systems
- **Word processor** – save, edit, and format the words you write
- **Photo viewer** – show slide shows of your favorite photo albums
- **Clock** and **calculator** – tell the time and do math!

You must have **The Grid 2** installed to use this grid set. Download grid bundle for free from Sensory Software Online Grids. Contact ZYGO-USA for a demonstration copy of **The Grid 2**.

GridTalk

A grid set for *The Grid 2* by Sensory Software International Ltd

GridTalk has been designed for users with emerging literacy. It requires the user to know the first letter of words that are not on the front page, and uses symbols to aid word finding.

Core Vocabulary

Language studies have shown that we use the same few words (core vocabulary) in almost everything we say. **GridTalk** has the core vocabulary on the first page for immediate access.
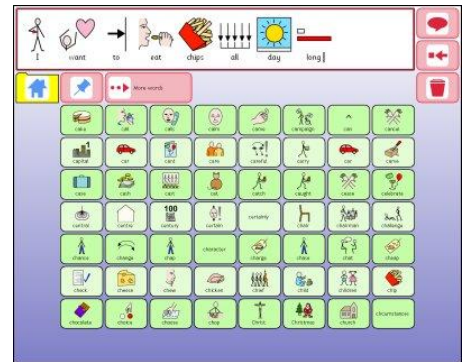

- ✧ People - I, me, my, you, etc.
- ✧ Small words - a, and, at, etc.
- ✧ Verbs - am, are, be, etc.
- ✧ Common - yes, no, +s (plural)
- ✧ Word groups

Selecting a word group, such as days, displays the word group words in the cells at the bottom of the page.

Additional Vocabulary

For finding the words that are not in our core vocabulary, **GridTalk** has additional vocabulary arranged alphabetically. Select a letter from the right-hand side of the front page to display a list of words starting with that letter.

Symbols are included to aid word finding. These word lists provide access to the top 2,000 words that we use in everyday speech. The word lists in The Grid 2 are easy to edit, so you can quickly add or remove words.

Verb morphology

Select a verb and alternate forms of the verb are displayed to help you complete the sentence.

Keyboard with prediction

Type a letter to start prediction. Predicted words are displayed with symbols to aid word finding, and the "sounds like" button will allow users to find words they are not sure how to spell.

Special Features

GridTalk includes grids for e-mail and text messages, browsing the internet, Skype, and ECU.

You must have **The Grid 2** installed to use this grid set. Download the grid bundle from Sensory Software Online Grids. Contact ZYGO-USA for a demonstration copy of **The Grid 2**.

Ingfield Dynamic Vocabularies

A grid set for *The Grid 2* by Sensory Software International Ltd

Ingfield Dynamic Vocabularies (IDV) is a topic-based system that place all the necessary elements of a sentence on one page. This makes **IDV** a quick and easy way to create complete sentences.

IDV is organized in four levels, from A to D. As you go up through the levels, the number of cells on each page increases, allowing more vocabulary to be included on

each page. Higher levels also include more topics and sub-topics. The layout of the grids is designed to allow easy progression from one level to the next.

Grids can be customized or extended as much as required.

You must have **The Grid 2** installed to use this grid set. Contact ZYGO-USA for a demonstration copy of **The Grid 2**.

Key Series

Grid sets for *The Grid 2* by Sensory Software International Ltd

Key 48

Key 48 is a new vocabulary for young adults with basic literacy skills and moderate access difficulties. **Key 48** supports a range of users including those who prefer direct access.

Word prediction in the eye line is the most useful place for many people. Switch users are also supported by the arrangement of the letter board with vowels on the first column.

For those who would prefer it there is a very large picture supported vocabulary arranged topically rather than grammatically. The scroll feature that is unique to Grid 2 means that words within a topic are not confined to the 48 cells on a page and the user can add more words to the topic list to suit their individual needs.
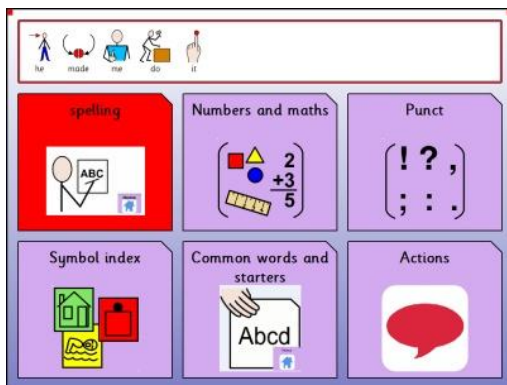

Finally, there is a comprehensive set of subject pages that are arranged to serve the mainstream or special school curriculum. These pages also contain vocabulary that can be useful generally. For example, every major country and all U.S. states, counties, and cities can be made readily available on the geography pages.

Key 6

Key 6 has been developed for the teenager/young adult who has at least some basic literacy skills but significant difficulty with access. The layout suits those who:

- can use a fist point to accurately select one out of six options
- can be accurate with linear scan using one or two switches
- can select one out of six options using an eye gaze tracking device

Key 6 and **Key 48** were developed by Marion Stanton. Marion is a special needs teacher and AAC consultant. She works for Communication and Learning Enterprises (CANDLE) who specialize in curriculum and communication. They are based in Yorkshire and provide advice to families, schools, colleges and education authorities across the U.K.

Select any or all five sets: Key 6, Key 8, Key 12, Key 24, and Key 48. Progress from simple to complex.

You must have **The Grid 2** installed to use these grid sets. Download each grid bundle from Sensory Software Online Grids. Contact ZYGO-USA for a demonstration copy of **The Grid 2**.

Seashell Speak and Sign

A grid set for *The Grid 2* by Sensory Software International Ltd

Seashell Speak and Sign is a British Sign Language (BSL) vocabulary which uses videos of sign language alongside speech. It allows the user to access over 1,000 different signs.

Seashell was designed for a group of deaf teenagers who have cerebral palsy and learning disabilities. **Seashell** could also be used by non-signing people to communicate in basic sign language or to learn signs.

Key Features

The key features of **Seashell** are:

- symbol based
- provides choice of whether to 'speak message' or 'sign message'
- modern young adult vocabulary
- large vocabulary (over 1,000 words)
- supports functional key word communication, not English grammar
- full screen signing videos
- reflects some features of BSL (British Sign Language)
- consistent, simple layout and navigation
- blank cells for easy insertion of new vocabulary and new pages

Seashell was developed by Jackie Barker, MA, BSc. Jackie is a Speech and Language Therapist working for Royal School for the Deaf and Communication Disorders in Manchester, U.K. RSDCD provides residential education for people with sensory impairment and complex learning disabilities.

You must have **The Grid 2** installed to use these grid sets. You can then download the pages for free from the Sensory Software Online Grids site. Contact ZYGO-USA for a demonstration copy of **The Grid 2**.

Star Talker

A grid set for *The Grid 2* by 🔵 Sensory Software International Ltd

Star Talker 2 promotes effective text communication in many useful ways.

Quick Talking

Start typing in **Star Talker 2**, and predicted words are displayed on the left. Once you have written your sentence, just hit speak to read it aloud (or you can get **Star Talker 2** to speak automatically when you finish a sentence). The prediction learns as you write, so the words you use often will appear at the top of the list. There is also next-word prediction to suggest words that might follow on from what you have written.

Save Common Messages

At the heart of **Star Talker 2** are the "chat messages", a list of messages saved for quick retrieval. If you have written a message that will be useful later, just hit "add" to add it to your message list. When it comes to finding it later, simply start typing one of the words in the message. Any messages that include the word you write are displayed, helping you to find them very quickly.

Star Talker 2 includes eight message lists, of varying topics (such as "personal" or "shopping") so you can easily organize your messages.

Always in touch

Star Talker 2 also includes grids for e-mail and text messaging, and grids for using Skype. Whether out-and-about or at home, **Star Talker 2** keeps you in touch with your friends and family.

Do more, say more

Star Talker 2 also includes a web browser, calculator, music player, and word processor, and can be used as an environmental control system, allowing you to do much more than just communicate!

You must have **The Grid 2** installed to use these grid sets. You can then download the pages for free from the Sensory Software Online Grids site. Contact ZYGO-USA for a demonstration copy of **The Grid 2**.

Starting Blocks

A grid set for *The Grid 2* by Sensory Software International Ltd

Starting Blocks is an exciting grid set for introducing computer-aided communication to young children.

Starting Blocks was designed and created by Sally Conner. There are hundreds of grids providing many hours of fun as you progress from very simple interaction through to independent communication.

The targeted activities develop core skills, and a clear 'road map' makes it easy to see where to go next - and how far you have come! At every step there are a variety of activities, so you can focus on one skill until it is fully mastered, without the tasks becoming repetitive.

Key Features

- A fun and interactive way to teach children to use switches or touch screen for communication.
- Focus on interactive PLAY, spending 20% with the computer and 80% interacting with people.
- Workbooks guide you step by step, and help you with some fantastic imaginative activities.
- Play again and again or easily edit with The Grid 2 to produce new, individual pieces.
- The optional Toy Box is offered to help you get started with the grids right away.

Starting Blocks is divided into three stages, each of which has activities for developing different skills:

ON YOUR MARK	GET SET	GO
Taking Turns	Categorizing	Go Step 1
Making Choices	Navigating	Go Step 2
	Row/Column Scanning	Go Step 3
		Go Step 4

Starting Blocks Toy Box

Starting Blocks Toy Box includes lots of toys and equipment to help you to use Starting Blocks right away:

- 2 switches (1 blue, 1 yellow)
- JoyCable switch adaptor
- The Gruffalo book and audio CD
- Doctor's activity kit
- Play Doh
- Drawing book and crayons
- Snap-Clap Crocodile and Rubber Duck toys for hide-and-seek activities
- ... and more!

Talk Together

A grid set for *The Grid 2* by Sensory Software International Ltd

Talk Together is a unique new way for a child and communication partner to work together.

From the very beginning, this innovative vocabulary package encourages your involvement in modeling and supporting a developing vocabulary – all within a highly intuitive set of pages that enables children to say what they want. A wealth of on-screen support and ideas are available at the touch of a button at every stage, so there is no need to constantly refer to the manual. The multilevel page sets place the emphasis on play, activities and having fun – with a stable **core vocabulary** to use at all five stages!

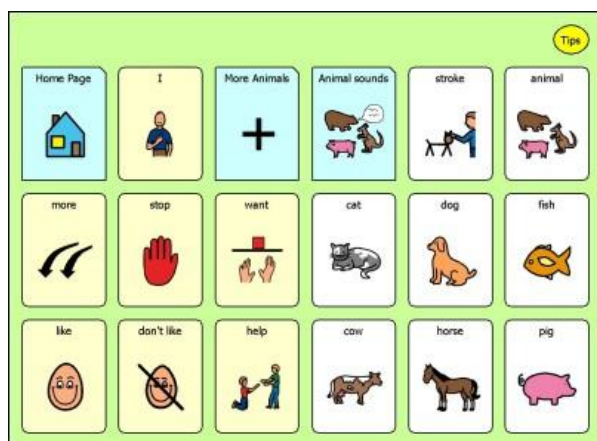

It takes two to talk!

What's different about **Talk Together** is that it is designed to complement existing low-tech communication strategies and actively encourages the involvement of a communication partner.

The benefits

Integrated with a stage-by-stage guide that helps you develop a child-centered vocabulary, including how to introduce it, how to help your child learn, and how to support their developing skills.

Emphasis on play, activities, and having fun

Multilevel page sets with a comprehensive pre-stored vocabulary and plenty of space for personalization.

- Easy access to a stable core vocabulary from every topic page. The core vocabulary has been chosen to enable the child to achieve at speaking and listening P-Levels through to Level 1.

- Gives the child real ownership of the system and its content.

- Switch and keyguard-friendly page design.

Early literacy skills are encouraged and supported with phonic alphabets, storytelling and story reading pages.

Fax: (510) 770-4930

Who is it for?

Talk Together is ideal for children who need to use symbols to communicate.

- Supports the vocabulary development of children who have just begun to use a communication aid, and on through more complex symbol use

- Children using a wide range of access methods, from touchscreens to switches

- Access to core words, describing words and action words from every page, plus 'My Help' at Stages 4 & 5

- The core vocabulary is on the left of the page, and the topic vocabulary is on the right

- The yellow 'Tips' buttons give page-specific guidance to let you get the most from the vocabulary

NOTE: Talk Together is currently only available with PCS symbols from Mayer-Johnson, which must be purchased as an add-on to The Grid 2. The Grid 2 comes standard with SymbolStix from News-2-You and Widgit Literacy Symbols.

Download

Download your *free* demonstration copy from Sensory Software Online Grids. You must have The Grid 2 installed to use this grid set. If you would like to trial The Grid 2 and the Talk Together grid set, contact ZYGO-USA for a demonstration copy of The Grid 2, install it to your PC, then download the Talk Together add-on.

Demonstration CD's

Demonstration CDs for **The Grid 2** and Acapela speech synthesis are available on request. This demo is fully functioning for a period of 30 days, after which it must be licensed to continue.

Talk Together was developed by the Ace Centre.
This version for The Grid 2 was created by Sensory Software.
